ANTU LSS PRO

QUICK START GUIDE

Institutional Liquidity Sweep & Fair Value Gap Execution System | Pine Script v6

Quick Start Guide

Rapid 2-Minute Deployment Manual

Welcome to ANTU LSS PRO

This Quick Start Guide is designed to get you up and running immediately. Follow these 9 sequential steps to deploy the indicator and execute setups with institutional clarity.

WHAT TO DO FIRST (THE 9 STEPS)

Step 1: Connect Broker & Install Indicator

- Open [TradingView.com](https://www.tradingview.com).
- Click **Trading Panel** at the bottom to connect your broker (**Dhan**, **Fyers**, or **Paper Trading**) for direct chart trading without extra fees.
- Next, click **Pine Editor**, open a **New indicator**, delete default text, and paste **`ANTU_LSS_PRO.pine`**.
- Click **Save** (title: **`ANTU LSS PRO`**) and click **Add to chart**.

Step 2: Open Your Preferred Chart

- Select a liquid asset (e.g., Nifty 50, Bank Nifty, Reliance, EURUSD, Gold, or Bitcoin).
- Switch to an active intraday timeframe: **5-minute** or **15-minute** charts are recommended for standard day trading.

Step 3: Configure Settings for Your Asset

- Click the **Gear icon (Settings)** next to ANTU LSS PRO on your chart.
- Check the **Market Session**:
- Indian Markets (NSE/BSE): Keep default **`"0915-1530"`**.
- US Markets: Set to **`"0930-1600"`** (New York time) or cover your hours.
- 24/7 Crypto or Forex: Set to **`"0000-2359"`**.
- Verify **Swing Length** (default: 10) and **R:R Ratio** (default: 2.0).

Step 4: Understand Liquidity Levels

- **Sell-Side Liquidity (SSL):** Resting sell-stop orders below swing lows.
- **Buy-Side Liquidity (BSL):** Resting buy-stop orders above swing highs.
- The indicator monitors up to 5 un-swept levels simultaneously in the background.

Step 5: Wait for a Valid Sweep

- Do not enter on market breakouts!
- Watch for price to wick beyond a pivot level and close back inside:
- **SSL Sweep:** Price dips below an SSL low and closes above it -> Teal label **"SSL▲"** prints on chart.
- **BSL Sweep:** Price pierces above a BSL high and closes below it -> Red label **"BSL▼"** prints on chart.
- A sweep sets the directional bias and activates the search for an entry.

Step 6: Understand the Fair Value Gap (FVG)

- A sweep alone is not enough. You must see displacement!
- The algorithm requires a 3-candle imbalance (FVG) to form *after* the sweep in the direction of the reversal.
- The algorithm calculates the exact **50% midpoint** (Consequent Encroachment) of this imbalance.

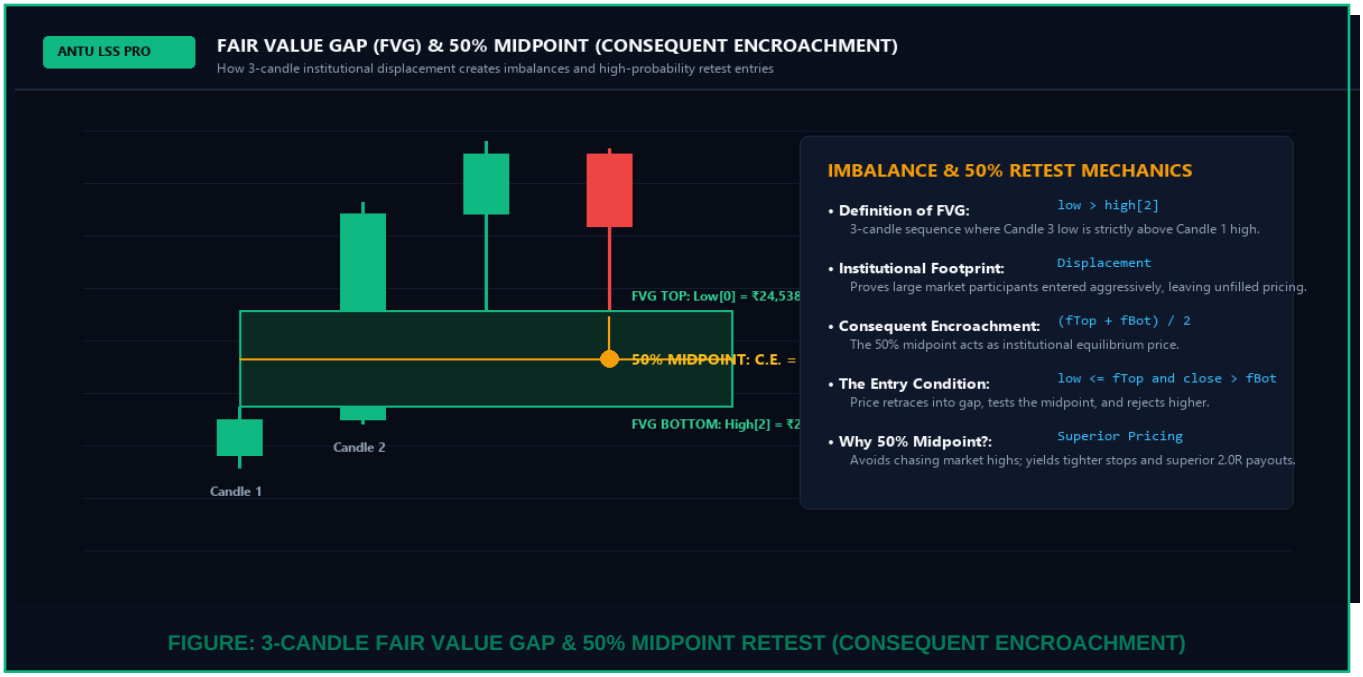

FIGURE: 3-CANDLE FAIR VALUE GAP & 50% MIDPOINT RETEST (CONSEQUENT ENCROACHMENT)

Step 7: Check the LONG or SHORT Signal

- When price pulls back to retest the 50% midpoint of the FVG:
- A dashed white line plots at the **Entry Price**.
- A red box plots your **Stop Loss** (anchored to the sweep wick + ATR volatility buffer).
- A green box plots your **Take Profit** (projected at 2.0x your risk distance).
- A directional entry label prints (■ `LONG` or ■ `SHORT`).

Step 8: Configure Real-Time Alerts

- Click the **Alert (Clock)** icon on TradingView.
- Select **ANTU LSS PRO**, set Condition to **"ANTU LSS PRO Any"** (or use *"Any alert() function call"* for dynamic JSON payloads).
- Set Trigger to **"Once Per Bar Close"**.
- Turn on your preferred notifications (Mobile push, desktop sound, email).
- Click **Create**. You can now step away from the screen!

Step 9: Apply Personal Risk Management

- **The Golden Rule:** Never risk more than 1% to 2% of your total account capital on any individual trade setup.
- Compute your position size:

Shares / Lots = (Account Capital x Risk \% / Entry Price - Stop Loss Price)

- Let the trade run to either the Stop Loss or Take Profit box without emotional interference.

Quick Execution Checklist

Action Item	Verification
1. Active Trading Session	[ ] YES
2. Confirmed Liquidity Sweep ("SSL▲" or "BSL▼")	[ ] YES
3. Subsequent FVG Formed in Reversal Direction	[ ] YES
4. Price Retesting 50% Midpoint of FVG	[ ] YES
5. Risk Sized to 1%–2% Maximum Capital Loss	[ ] YES
6. Alert Set to "Once Per Bar Close"	[ ] YES

Trade with mechanical rules, respect your risk limits, and let mathematical expectancy work for you.
